SPEAK UP!

# 29<sup>TH</sup> INTERNATIONAL CONFERENCE ON BUILDING MATERIALS, PRODUCTS AND TECHNOLOGIES

An international meeting point for experts from science, industry and policy to address the future of construction. The focus is on how digital tools, low-carbon approaches and responsible use of raw materials can drive safer and more sustainable solutions. The event offers space to present new results, share best practices and build cooperation across disciplines.

## KEY TOPICS

RAW MATERIALS CRISIS

Threat or Opportunity?

ARTIFICIAL INTELLIGENCE

New Collaborator for Research and Industry

SMART MATERIALS

Materials with Added Value

ALTERNATIVE MATERIALS

Compromise or Advantage

SAFETY

Critical Infrastructure Resilient

CIRCULARITY

Second Life for Stored Resources

CEMENT AND CONCRETE

Low-Carbon Future

# RESPONSIBLE RESEARCH, SAFE FUTURE

**Responsible research** means working on technologies that not only meet technical requirements but also respond to ecological and social challenges, creating solutions that benefit both people and the environment. **Safe future** in construction depends on durable and resilient approaches that lower emissions, save resources, and support the circular use of materials. Research and practice must go hand in hand to achieve these goals.
